Dylan Casanova

Software Engineer

👤 Profile

A profoundly motivated, energetic and driven attitude, with a varied professional background. I find joy in learning, helping, supporting others and understanding the "why" companies operate the way they do, with the goal of being more efficient and productive. Additionally, I am always aiming to improve myself and deliver the best possible outcome.

💼 Employment History

Software Engineer at AMTIL, Remote

January 2022 — Present

- Successfully created a full-stack application for the education team utilizing ReactJS for the user interface and NodeJS/Express for the backend API
- Diligently developed a CRUD-based Content Management System (CMS) using NodeJS/Express for the backend services
- Used Figma to collaborate with UI/UX designers
- Followed AGILE development methodology
- Utilize GIT and its many features for version control

Associate Software Engineer at theCOOP, Remote

August 2021 — January 2022

An early stage startup founded to help career changers accelerate their transition into the Engineering and Design fields by providing them real world experience and mentor-ship, building projects and working in Agile teams, and delivering on deadlines

- Utilized Front-end code using React.js to create multiple views of designs handed off to developers from the design team.
- Successfully programmed API routes to add to our Restful server with Node and JavaScript
